Frozen ground is the product of cold climates as well as a variety of environmental factors. Its major characteristic is the accumulation of large quantities of ice which may exceed 90% by volume. Soil water changing to ice results in ground heaving, while thawing of this ice produces ground subsidence often accompanied by soil flowage.

Field and laboratory work will be performed in small groups, to train teamwork skills. Through lectures students will be introduced to the academic content of the course. Lectures are supplemented with assignments mainly taken from "Frozen Ground Engineering" (2004).

An Introduction To Frozen Ground Engineering PDF

The clearing of the whiteout enables Kristoff to see Anna, and he runs to her, but as Anna looks around, she sees Hans about to stab Elsa. Even with her own life at stake, Anna rushes in front of Hans, blocking the knife. As she does so, her frozen heart finally consumes her, turning her into a statue of ice, and shattering Hans' blade.
