A linear circuit is an electronic circuit which obeys the superposition principle. This means that the output of the circuit  $F$  when a linear combination of signals  $ax_1 + bx_2$  is applied to it is equal to the linear combination of the outputs due to the signals  $x_1$  and  $x_2$  applied separately:  $F = a F + b F$   $\{\displaystyle F=aF+bF\}$  It is called a linear circuit because the output of such a circuit is a linear function of its inputs. An equivalent definition is that a linear circuit is a circuit in w
