Crohn's disease affects the small intestine and large intestine, as well as the mouth, esophagus,...

An Evidence-Based Systematic Review on Medical Therapies ...

Evidence in Adults. The largest controlled trial of enteral nutrition versus drug treatment in active Crohn's disease is the European Cooperative Crohn's Disease Study IV (54), which showed clinical remission rates of 53% and 85% in pa- tients on enteral nutrition or corticosteroids and sul- fasalazine, respectively.

Inflammatory bowel disease (IBD) - Symptoms and causes ...

OBJECTIVE A recent study raises concerns that dipeptidyl peptidase 4 inhibitors (DPP4i) are associated with increased risk of inflammatory bowel disease (IBD). We evaluated the association between new use of DPP4i and IBD risk compared with other second-line antihyperglycemics. RESEARCH DESIGN AND METHODS We implemented an active-comparator, new-user cohort design using two U.S. administrative ...

Evidence-based clinical practice guidelines for ...

Patients with inflammatory bowel disease (IBD) have a higher risk of developing PD compared with non-IBD individuals. Gene association study has found a genetic link between IBD and PD, and an evidence from animal studies suggests that gut inflammation, similar to that observed in IBD, may induce loss of dopaminergic neurons.
