(PDF) Protected areas and poverty - ResearchGate

More than 12,700 protected areas have been established around the world, accounting for 13.2 million km² (an area greater than the United States or China), or 8.81% of Earth's land surface (). Although protected areas are generally believed to be the cornerstones of biodiversity conservation and the safest strongholds of wilderness (2, 5, 6), human encroachments and threats are still very ...

Last Stand: Protected Areas and the Defense of Tropical ...

Much of this growth has occurred within the last 30 years; the area of protected areas has doubled since 1975 (see figure 1) and covers nearly 10% of Earth's terrestrial surface (Phillips 2000). Despite concerns to the contrary, some governments appear to be willing to continue this trend, at least in sparsely populated areas of the world (Dudley et al. 1999).

Time for a new global protected area target

Assessing the management effectiveness of a protected area system is a critical step toward achieving the goal for which protected areas are established: the conservation of biological diversity. Management effectiveness assessments are an essential component of systematic conservation planning processes (Margules and Pressey 2000). They can help policymakers identify discrepancies between ...

Protected Area Assessments in Perspective | BioScience ...

The stereotypical view of protected areas as state run national parks is also changing. Privately protected areas, sacred natural sites, indigenous and community conserved areas and sustainable use areas all provide new opportunities and a rethinking of once-accepted ideas on what protected areas stand for and their management approach. RESPONSES

Last stand : protected areas and the defense of tropical ...

During the past century, tropical rain forests have been reduced to about half of their original area as a result of increasing human encroachment. Protected areas have been established, in which consumptive use by humans is limited. Where these areas have been properly planned, created and managed, they have had success in meeting their goal of conserving biodiversity.

Session 4: Dynamics between protected areas and economic use

This article provides analysis of the issues relating to movement towards new models for Indigenous-led conservation in light of Canada's initiatives for greater protected areas representation through Target 1. We provide a background on Canada's Pathway to Target 1, which is based on Target 11 from the Aichi Biodiversity Targets set forth by the Convention on Biological Diversity (CBD).
