I am convinced a Jr. High student could master neuroanatomy if they had this book. It is fine to buy a used copy as long as it wasn't written in as it is a workbook with fill in the blanks. Each question teaches a concept and asks you a simple question. It is layered in such a way that you learn neuroanatomy without realizing it.

However, he did show us a programmed instruction approach for reaching a broad audience of more capable learners – the Sidman and Sidman [1965] Neuroanatomy text (subsequently updated to take advantage of newer technological support [Gould & Brueckner, 2007]). Regrettably, this type of instruction also remains the exception.

For a programmed workbook in clinically oriented neuroanatomy, the combination should be unbeatable. The 645 pages of this book contain 1,318 items, each in the form of a sentence or paragraph with missing words to fill in, and usually with a small diagram which in many cases is a 3-D phantom rendering.
