infections and tumours follow. HIV also directly damages certain organs (e.g. the brain white matter).

Textbook Reviews | Pathology Resident Wiki | Fandom

Pathogenesis of HIV-1 is complex and is characterized by the interaction of both viral and host factors [7]. In HIV infection, disease progression correlates both with increased viral load [27] and elevated levels of apoptosis [28]. Usually, T-lymphocyte cells inversely correlate with levels of apoptosis [29].
